INTERIM MEMORANDUM
Metallized Plastic Films

25X1

Enclosed are two prints each from three negatives exposed through (a) .003 inch aluminum acetate, (b) .001 inch lime vinyl, and (c) control shot, normal exposure.

The .003 inch aluminum acetate sheeting was used as the complete covering for the camera box, while the .001 inch lime vinyl was used as a ribbon on the package.

A noticeable loss of contrast is apparent in the filtered shots as would be expected. Some loss of definition due to grain size may also be expected in enlargements of this size as the negatives are 35 mm.

Dear Howie,

Enclosed is a revised copy of the cost estimate for the Camera Speed Control Knobs. Unfortunately, I erred in the original cost breakdown by using 135% instead of 125%.

Regards,

Dear Joe,

Enclosed are three photographs of the suggested set-up which I discussed over the phone with you the other day. We did not go ahead and purchase the but merely took it on loan for sufficient time to get these photos. I know that we decided that this was not an acceptable design, but thought it may be interesting to have photos of this possibly for future reference.

STAT

To date I have not received the letter that you said you would forward regarding the case you saw in New York.

Regards,
